

Announcement

Document no. A/05/26/01

Section Language Center International College (LCIC)

Date 28th May 2026

To: All relevant people

From: Dr. Khwanchol Kampan, Director of LCIC

Subject: LCIC Policy on the Ethical Use of Artificial Intelligence (AI) in English Courses

The Language Center and International College (LCIC), Siam University, recognizes that Artificial Intelligence (AI) technologies have become increasingly important in education and professional environments. Although the use of AI tools is not prohibited by Siam University, LCIC reserves the right to establish specific guidelines and regulations regarding the use of AI in English courses to ensure that students continue to develop their own language proficiency, analytical skills, creativity, and academic competence.

Principles for the Use of AI in LCIC English Courses

These principles apply to all coursework, including assignments, essays, reports, projects, examinations, presentations, and other academic activities.

1. Originality and Academic Integrity

Students must submit original work that reflects their own understanding, analysis, and language ability. AI-generated content must not be submitted as entirely the student's own work.

2. Permitted Use of AI

Students may use AI tools as learning support tools only for purposes as:

- draft feedback and revision
- research and learning support

Students must critically review and verify all AI-generated content and ensure that submitted work reflects their own understanding, analysis, and academic ability.

3. Transparency and Citation

Any significant use of AI tools must be clearly acknowledged by the student. Students should properly cite or disclose the use of AI-generated content in accordance with APA guidelines or instructor requirements. (Please see LCIC AI Declaration form)

4. AI Detection and Review

Lecturers reserve the right to use AI detection software and other academic review methods to evaluate the authenticity and originality of student work. Students may also be asked to explain, revise, or demonstrate understanding of submitted work.

5. Responsibility and Accountability

Students are fully responsible for the accuracy, originality, and ethical integrity of all submitted work, regardless of whether AI tools were used.
